

Missouri Weekly Influenza Surveillance Report 2022-2023 Influenza Season¹

Week 20: May 14, 2023 – May 20, 2023

All data are preliminary and may change as more reports are received.

Summary:

- Seasonal influenza activity in Missouri has remained Sporadic², while the Influenza-like illness (ILI) activity decreased to Level 1 in the minimal category.³
- During Week 20 a total of 44 laboratory-positive⁴ influenza cases (18 influenza A, 26 influenza B and 0 untyped) were reported. The influenza type for reported season-to-date cases includes 93.7% influenza A, 5.9% influenza B and 0.4% untyped. The percentage of respiratory specimens testing positive for influenza in Missouri laboratories reporting to the National Respiratory and Enteric Virus Surveillance System (NREVSS) was 0.40% for Week 20. The number of Missouri facilities reporting to NREVSS for Week 20 was limited.
- Influenza-like illness activity for the hospital emergency room visit chief complaint data reported through ESSENCE decreased to 1.11% for Week 20 (Figure 6).⁵
- Two hundred forty six influenza-associated deaths have been reported in Missouri as of Week 18 (week ending May 6, 2023).⁶
- Thirteen influenza outbreaks and two influenza-associated school closures have been reported as of Week 20.
- Seasonal influenza activity continues to decline nationwide. National influenza surveillance information is prepared by CDC and is included in the weekly FluView report, which is available online at <http://www.cdc.gov/flu/weekly/fluactivitysurv.htm>.

¹The 2022- 2023 influenza season begins CDC Week 40 (week ending October 8, 2022) and ends CDC Week 39 (week ending September 30, 2023).

²Sporadic is defined as: Small numbers of laboratory-confirmed influenza cases or a single laboratory-confirmed influenza outbreak has been reported, but there is no increase in cases of ILI.

³ILI Activity indicates levels of activity on a scale of 1-13 ranging from minimal to very high. For more information see <https://gis.cdc.gov/grasp/fluview/main.html>

⁴Laboratory-positive influenza includes the following test methods: rapid influenza diagnostic tests (antigen), reverse transcriptase polymerase chain reaction (RT-PCR) and other molecular assays, immunofluorescence antibody staining (Direct (DFA) or Indirect (IFA)), or viral culture.

⁵ILI is defined by ESSENCE as Emergency Department chief complaints for Influenza or (FeverPlus and (Cough or SoreThroat) and not NonILIFevers).

⁶Influenza deaths are collected from Missouri's death certificate data. Decedents with influenza listed as a cause or contributor to death are classified as an influenza-associated death. Death certificate data are generally available two weeks following the current CDC week.

Data Figures

Figure 1. Number of Laboratory-positive[†] Influenza Cases by Influenza Type, Missouri, CDC Weeks 18-20 (April 30, 2023 – May 20, 2023)*

Influenza Type	Week 18	Week 19	Week 20	2022-2023* Season-to-Date
Influenza A	45	42	18	101,407
Influenza B	69	72	26	6,394
Influenza Unknown Or Untyped	1	0	0	482
Total	115	114	44	108,283

[†]Laboratory-positive influenza includes the following test methods: rapid influenza diagnostic tests (antigen), reverse transcriptase polymerase chain reaction (RT-PCR) and other molecular assays, immunofluorescence antibody staining (Direct (DFA) or Indirect (IFA)), or viral culture.

*Influenza season begins with the week ending October 8, 2022 (CDC Week 40) Data Source: Missouri Health Information Surveillance System (WebSurv).

Figure 2. Number of Laboratory-positive[†] Influenza Cases and Case Rates by Age Group, Missouri, CDC Week 20 (May 14, 2023 – May 20, 2023)*

Age Group	Week 20 Cases	Week 20 Rate [‡]	2022-23* Season-to-Date	2022-2023* Season-to-Date Rate [‡]
00-04	12	3.26	15,984	4,342.53
05-24	9	0.58	45,425	2,904.40
25-49	13	0.67	23,085	1,188.06
50-64	4	0.33	11,998	999.66
65+	6	0.56	11,790	1,110.13
Total	44	0.72	108,283	1,764.31

[†]Laboratory-positive influenza includes the following test methods: rapid influenza diagnostic tests (antigen), reverse transcriptase polymerase chain reaction (RT-PCR) and other molecular assays, immunofluorescence antibody staining (Direct (DFA) or Indirect (IFA)), or viral culture.

*Influenza season begins week ending October 8, 2022 (CDC Week 40) Data Source: Missouri Health Information Surveillance System (WebSurv).

[‡]Incidence Rate per 100,000 population

Figure 3. Number of Laboratory-positive[†] Influenza Cases and Case Rates by Region, Missouri, CDC Week 20 (May 14, 2023 – May 20, 2023)^{}**

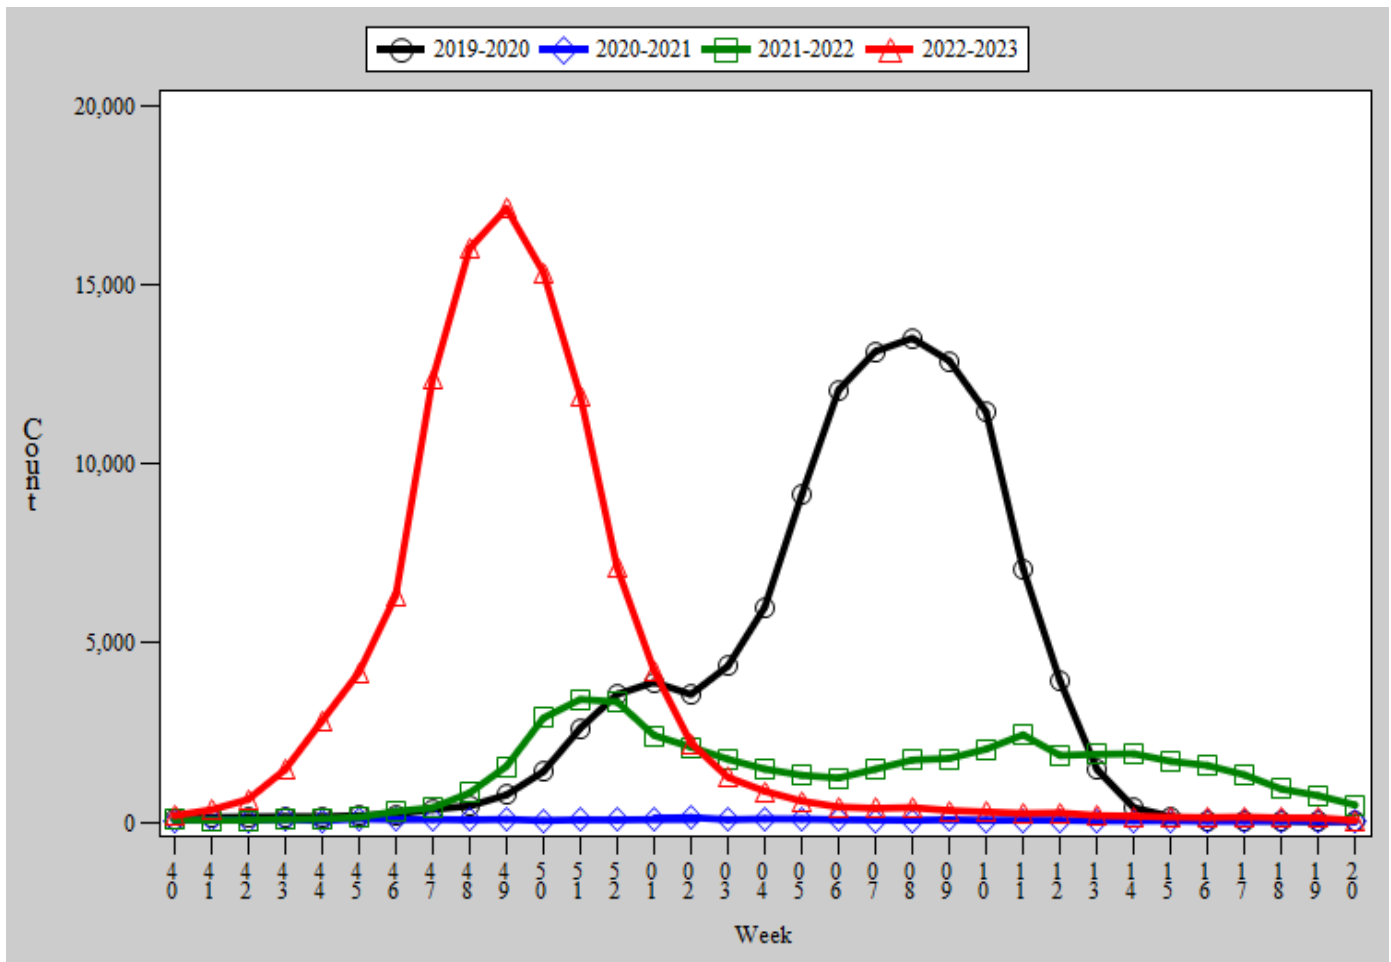

Region	Week 20 Cases	Week 20 Rate [‡]	2022-23* Season-to-Date	2022-23* Season-to-Date Rate [‡]
Central	4	0.59	11,351	1,682.08
Eastern	21	0.93	30,119	1,328.12
Northwest	8	0.49	30,988	1,893.28
Southeast	6	1.39	12,529	2,897.29
Southwest	5	0.48	23,296	2,217.33
Total	44	0.72	108,283	1,764.31

[†]Laboratory-positive influenza includes the following test methods: rapid influenza diagnostic tests (antigen), reverse transcriptase polymerase chain reaction (RT-PCR) and other molecular assays, immunofluorescence antibody staining (Direct (DFA) or Indirect (IFA)), or viral culture.
